

Rock | Solid™

BY SOLIDDRIVE®

For years, SolidDrive has been providing invisible audio solutions for homes, retailers, restaurants and more. With RockSolid™, invisible audio is brought outdoors. The only rock speaker on the market without grille holes, RockSolid has the appearance of a decorative boulder while providing omnidirectional audio coverage.

The secret to RockSolid is SolidDrive's "Sound Without Speakers" technology. SolidDrives use very high power

neodymium magnets and dual symmetrically opposed motors to convert audio signals into powerful vibrations that are transferred onto a surface by direct contact. For RockSolid, two SolidDrive SD1 units are mounted on the inside of the rock shell, driving the entire rock surface with your favorite music. Passive EQ modules are included to fine-tune the audio; a Euroblock connector makes it easy to attach it to the output of your amplifier. A theft-resistance bracket is also included.

SolidDrive®

SOUND | WITHOUT SPEAKERS™

The RockSolid shell was designed for SolidDrive by a company that provides “boulders” to theme parks around the world. Many visitors to the parks don’t realize the boulders aren’t real. Your outdoor living space, café or pool area can now have the same realistic rock appearance paired with the high-quality audio of SolidDrive. Three colors are available: sandstone, charcoal and red rock; custom colors can also be manufactured.

RockSolid is proudly made in the USA.

Mounted inside the RockSolid shell are two SD1sm SolidDrive surface-mount units. SolidDrive is also available for drywall (sheetrock) installations in walls or ceilings, direct-mount to glass, and in a desktop kit for portable uses. For more information, visit soliddrive.com.

Frequency Response: 80-15,000 Hz

Maximum Program Power: 400 watts

Minimum Amplifier Power: 200 watts

Dimensions: 19.5” wide, 21.5” long, 12” high

Coverage Angle: 360°

Drivers: 2 high-impedance (13 Ω) SD1s wired in parallel
